Abstract

Disclosed is a segment (15) of a sensor-supporting
element for a scraper-type device, which comprises at
10 least two pairs of runners (16a, 16b) that are arranged
essentially parallel behind each other. A support plate
(20) receiving sensors (21) is disposed between at least
one pair of runners (16). The segment (15) can be
combined with other such segments (15) so as to form a
15 sensor-supporting element.
